

Fort Hood 1st Responder Training

Recent MARCHE testing at Fort Hood (two weeks in April, 30 soldiers per week).

We asked 9 questions, with the last question "would you take the TMT to war?"
So there wasn't any bias between CAT/TMT exposure between the 2 groups.

Note: The live tissue testing on the previous slide was based on training by "Instructions For Use (IFU) only. The 1st responder training was trained by the vendor. So there was a 13% increase in acceptance vs the live tissue exercise.

Post Exposure CAT training

Pre Exposure CAT training

Would you take this tourniquet to war to use for extremity bleeding application?

Would you take this tourniquet to war to use for extremity bleeding application?
